FormFire

A Better Way to Explore Your Benefit Options

What FormFire does for the Employer

FormFire allows you and your employees to apply and buy coverage with any carrier - all in one online place. It is designed to work with any benefit application and is accepted by all major carriers. Simply decide which carriers you'd like to shop, and your broker can set up the rest of the process online.

SINGLE POINT OF ENTRY

Never ask your employees to complete paper application forms again!

SAFE AND SECURE

FormFire is HIPAA compliant and regularly audited by third party security experts, ensuring you and your employees' data is secure.

DO MORE WITH LESS

FormFire processes more applications in less time, giving you more time to do what you do best: work on your own business.

REAL-TIME MONITORING

FormFire allows you to automate the process of monitoring employee progress and see which employees have finished or need more time.

SAVE TIME

FormFire is one process to complete where all the information is saved. At next renewal, you and your employees won't need to re-enter their data. A quick update is all that's required.

ACCEPTED AND PREFERRED

Because FormFire interfaces with actual carrier processes, all major carriers accept FormFire. And because the information is so complete, many carriers prefer and process FormFire groups faster.

How does FormFire work?

Simple - Alpha will provide you with the materials to get started online. From there, you and your employees are guided through the application process automatically. All can finish immediately, or go back at any time to complete things. Once every employee is done, your broker will be able to send completed enrollments to as many carriers as you like. And for the next renewal, you and your employees just simply update their data online—no need to re-enter.

Form Fire is revolutionizing the way employees and employers apply for and buy benefits coverage.

New Look. More Power.
